Preface

This report provides highlights of Canadian agri-food trade in 1999. Emphasis is placed on changes in major trade flows compared to 1998. These changes include four areas: exports and imports; trade balance; the performance of bulk, intermediate and consumer-oriented products; as well as major destinations for Canadian products and sources of foreign supply.

This report contains an article by Statistics Canada featuring the computation of the trade data. The article highlights the "Edit and Imputation" processes, the data quality control and the linkages between Statistics Canada and the U.S. Bureau of the Census. By presenting the methodology used for processing the trade data, the article will help the readers of the *Quarterly Agri-Food Trade Highlights* in interpreting Canada's agri-food trade flows.

Please note that the data in this report are subject to revision, and therefore the interpretation of the information should be treated with caution. Further information on the current highlights of Canada's agri-food trade may be obtained by contacting Julien Destorel at destoju@em.agr.ca or at (613) 759-7462. An electronic version of this report is available on Agriculture and Agri-Food Canada's web site at www.agr.ca/policy/epad.

Executive Summary

According to Statistics Canada's trade data for the whole of 1999, Canada's agri-food exports totalled \$21.7 billion, a 4% decline compared to 1998. This decline in the value of total agri-food exports was due to lower world prices for certain commodities combined with the reduction in imports by some major importing countries. Lower levels of shipments of wheat (other than durum wheat), canola, flaxseed, soybeans and barley were a significant factor reducing export volumes. By year end, however, the prices for some of these commodities have increased and the import demand for Canadian agri-food products has started to strengthen in Asia.

Canada's agri-food imports totalled \$16.5 billion in 1999, up by 1% compared to 1998. This increase in total agri-food imports was relatively small compared to the growth in previous years. Lower commodity prices for raw sugar, coffee, bananas, fresh tomatoes and rice were responsible in part for this relatively small growth in imports.

The total value of agri-food trade (i.e. exports plus imports) declined 2% to \$38.1 billion, while Canada's agri-food trade surplus was down by 16% to \$5.2 billion in 1999. The trade surpluses for bulk and intermediate agri-food commodities declined 11% to \$4.2 billion and 30% to \$2.5 billion, respectively. The trade deficit registered for consumer-oriented products was down 27% to \$1.5 billion.

The export performance was mixed among the selected commodity groups. In 1999, grains, oilseeds, oilseed products, live animals, dairy products, and poultry and egg products registered declines in terms of the value of exports; while increases in exports were recorded for grain products (i.e. bakery products, pasta products), red meats, vegetables and potatoes, and alcoholic beverages and dried pulses. Exports of grains were down 7% to \$4 billion and oilseeds were down 24% to \$1.9 billion; by contrast, exports of grain products (i.e. bakery products, pasta products) rose 13% to \$1.5 billion and red meats (i.e. fresh and frozen beef and pork) totalled \$3 billion, up 23%.

The performance by selected groups of agri-food imports was also mixed during the 1999 period. Canada's imports of plantation crops (i.e. coffee, cocoa, tea, natural latex and rubber) were down 14% to \$1.5 billion and imports of grains

(especially corn and rice) declined 18% to \$317 million. Conversely, imports of fruit and nuts rose 6% to \$2.9 billion and imports of alcoholic beverages were up 16% to \$1.4 billion.

Exports to the U.S. accounted for 61% of the total value of Canada's agri-food shipments in 1999. Exports to the U.S. reached \$13.2 billion, up 3%. The growth in exports to the U.S. was the result of increased shipments of consumer-oriented products. Indeed, exports of bulk products to the U.S. were down 11% to \$1.3 billion, and exports of intermediate products declined 14% to \$3.4 billion; by contrast, exports of consumer-oriented agri-food products to the U.S. reached \$8.5 billion or a gain of 14% compared to 1998.

The highlights of agri-food trade with the U.S. during the 1999 period was marked by the surge in exports of red meats which totalled \$2.3 billion (up 24%) and the sharp declines in exports of live animals (excluding poultry) down 22% to \$1.5 billion and in exports of grain products down 21% to \$1.3 billion. A major factor in this change was the expanded slaughter capacity in Canada and the resolution of labour disputes at some plants.

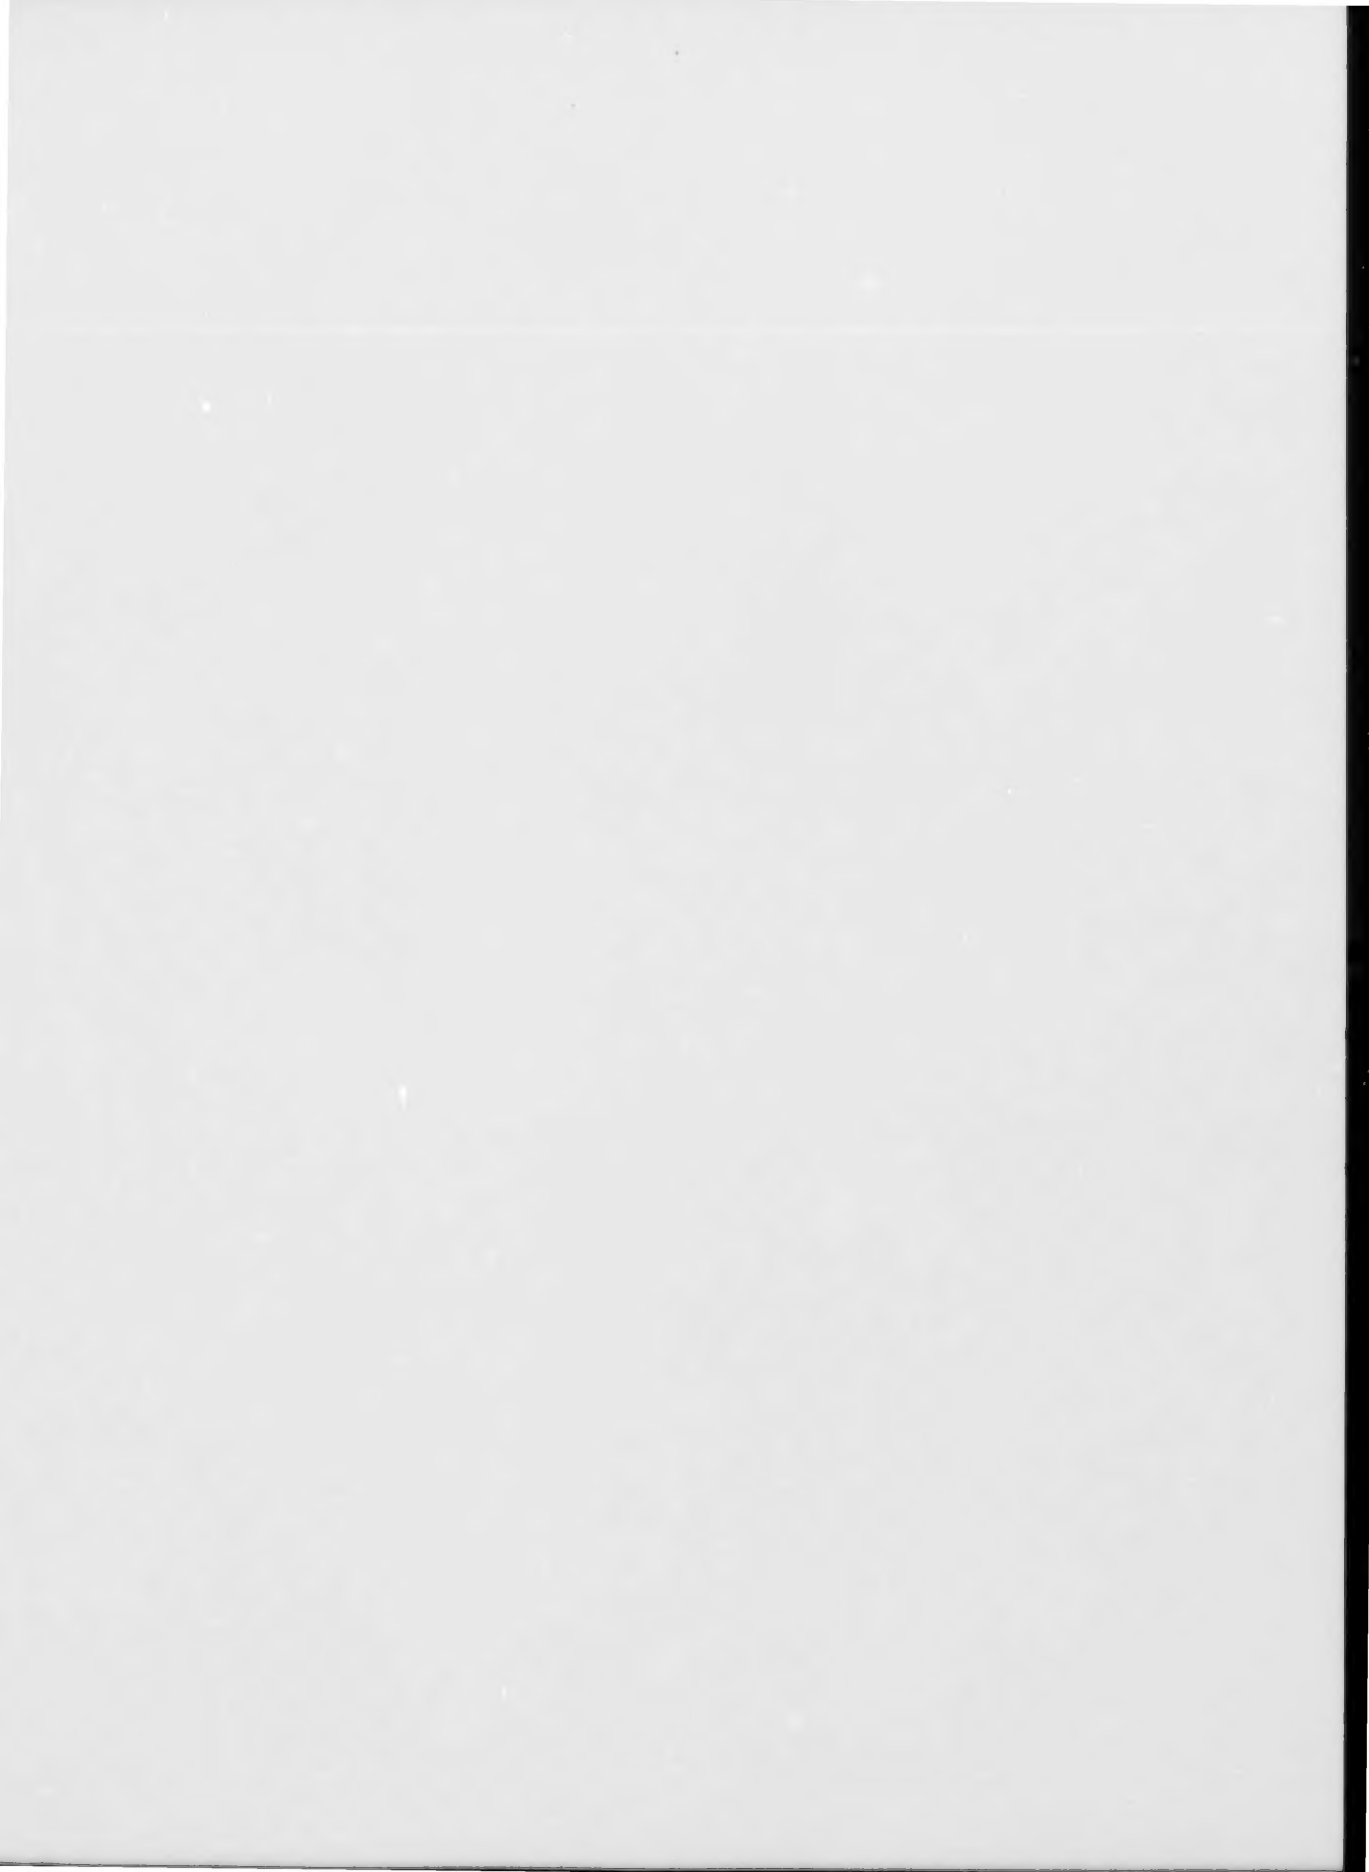

Imports from the U.S. represented 61% of the value of agri-food products entering Canada in 1999. These imports totalled \$10.1 billion, up 1%. Imports of bulk agri-food products from the U.S. were down 8% to \$881 million due to a large extent to the decline in imports of corn. Imports of intermediate products rose 2% to \$1.9 billion, while consumer-oriented imports from the U.S. reached \$7.3 billion, up 1%.

The total value of Canada-U.S. trade in agri-food products rose by 2% to \$23 billion in 1999. Canada's exports to the U.S. exceeded imports from the U.S. by \$3.1 billion, up 11% compared to last year period. Canada's trade surpluses with the U.S. declined in the cases of bulk commodities (down 17% to \$351 million) and intermediate products (down 29% to \$1.5 billion). The trade surplus in consumer-oriented products, however, registered a surge from \$268 million in 1998 to \$1.2 billion in 1999.

In 1999, exports to the European Union (EU-15) were down 18% to \$1.3 billion as a result of the declines in the major exported commodities such as grains (down 5%), oilseeds (down 51%). The 1999 EU-15 crop of flaxseed was unusually high. Exports of animal products other than meats and meat products to the EU-15 were down 38%. Exports to Japan were down 4% to \$1.9 billion, as the increases in exports of red meats (up 16% to \$433 million) and grains (up 4% to \$368 million) were offset by the declines in exports of oilseeds (down 10% to \$728 million), animal feeds (down 6% to \$121 million) and

grain products (down 25% to \$76 million). Exports to the Rest-of-Asia (which excluded Japan) totalled \$916 million, down 3%, and sales to Mexico and South America declined 14% to \$506 million. However, the trade highlights were also marked by increases in exports to the Philippines (up 34% to \$125 million) and a surge in the value of exports to Iran from \$200 million in 1998 to \$484 million in 1999.

Canada's agri-food imports from sources other than the U.S. rose by 1% to \$6.4 billion in 1999. At \$2.2 billion, imports from the EU-15 were up 8% and they represented one third of the imported agri-food products from the sources (which excluded the U.S.). Significant increases in imports from the EU-15 were registered by alcoholic beverages (up 18% to \$863 million), dairy products (up 7% to \$132 million) and fruit and nuts (up 27% to \$117 million). Imports from Asia declined 3% to \$959 million as a result of lower commodity prices. Imports from Asia were especially marked by the declines in the value of plantation crops (down 20% to \$274 million) and grain products such as rice (down 10% to \$60 million). The results with regard to imports from Latin American sources were mixed. Imports from Mexico were down 4% to \$377 million, while imports from Brazil rose by 9% to \$442 million in 1999.

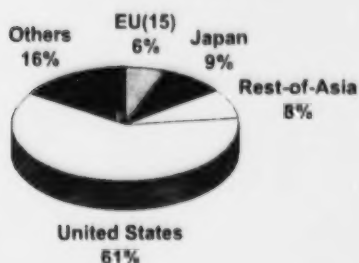

PART I

TRADE HIGHLIGHTS

Highlights for the year 1999

Figure 1

Shares of Total Canadian Agri-Food Exports by Destinations

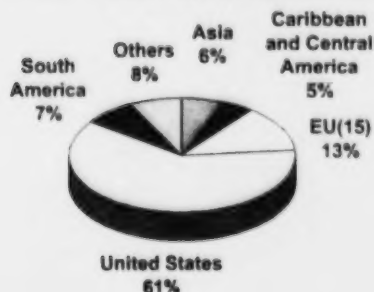

Total agri-food exports down 4%

Canada's total trade in agri-food products declined by 2% to \$38.1 billion in 1999. Total exports fell by 4% to \$21.7 billion in 1999. However, exports to the U.S. rose 3% to \$13.2 billion and represented 61% of the value of shipments in 1999 (Figure 1). By contrast, exports to Japan and the European Union (EU-15) which represented 9% and 6%, respectively, were down by 4% to \$1.9 billion and 18% to \$1.3 billion. Exports to the Rest-of-Asia (excluding Japan) declined 24% to \$1.8 billion due to a large extent to the reduced value of grain shipments to China in 1999. The other destinations represented 16% of Canada's total agri-food exports. The performance in these markets were mixed; the value of exports to Mexico declined 14% to \$506 million while shipments to Venezuela increased 21% to \$241 million.

Figure 2

Shares of Total Canadian Agri-Food Imports by Sources

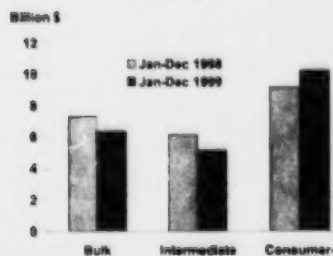

Total agri-food imports up 1%

At \$16.5 billion, total Canadian imports of agri-food products were up 1% in 1999. Imports from the U.S. reached \$10.1 billion, representing 61% of the total value of imports from all sources in 1999 (Figure 2). Imports from the EU15 rose 8% to \$2.2 billion or 13% of all agri-food imports. The third major source of agri-food products entering Canada was South America with a total value of \$1.2 billion, a share of 5% of total agri-food imports in 1999. Imports from Asia were down 3% to \$959 million, a share of 6% of total agri-food imports in 1999.

Figure 3

Canadian Exports of Agri-Food Products*

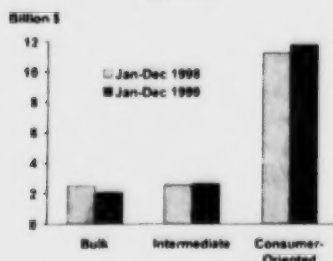

*Based on a bulk, intermediate and consumer-oriented (BCO) classification.

Bulk exports down 13%, intermediate product exports down 16% but consumer-oriented exports up 12%

Canada's exports of bulk and intermediate agri-food products declined significantly in 1999 as a result of lower prices for grains and oilseeds, reduced volume of wheat exports and weakening demand for agri-food commodities in some traditional destinations. As a result, exports of bulk and intermediate agri-food products were down 13% to \$6.3 billion and 16% to \$5.1 billion respectively. By contrast, exports of consumer-oriented products which represented 47% of Canada's total agri-food exports rose 12% to \$10.2 billion in 1999 (Figure 3).

Figure 4

Canadian Imports of Agri-Food Products*

*Based on a bulk, intermediate and consumer-oriented (BICO) classification.

Bulk imports down 18%, intermediate product imports down 2% and consumer-oriented imports up 5%

Imports of bulk agri-food commodities were down 18% to \$2.1 billion in 1999 essentially a result of the decline of 18% in the value of grain imports such as corn. Imports of intermediate products rose 2% to \$2.6 billion reflecting increases in imports of grain products (up 4%) and live animals excluding poultry, up 44%. Consumer-oriented agri-food products reached \$11.7 billion, up 5% compared to 1998 (Figure 4). Consumer-oriented accounted for 71% of Canada's total agri-food products in 1999.

Agri-food trade surplus down 16%

At \$5.2 billion, the agri-food trade surplus declined in 1999 by 16% from its level of \$6.2 billion in 1998. The value of the trade surplus for bulk commodities were down 11% to \$4.2 billion, while the trade surplus for intermediate agri-food products declined by 30% to \$2.5 billion. The lower level of the trade balances for bulk and intermediate commodities reflect declines in the value of exports of grains, oilseeds, oilseed products and live animals excluding poultry. Similarly, Canada's trade deficit for consumer-oriented agri-food products declined in 1999, totalling \$1.5 billion or down 27% compared to \$2.1 billion in 1998.

Exports of Selected Commodity Groups

Exports of grains down 7%, oilseeds down 24%, and dried pulses up 10%

Canada's grain exports reached \$4 billion in 1999, down 7% compared to 1998, essentially due to the declines in exports of wheat. The lower export prices for wheat commodities were reflected in a decline of 13% in the value of durum wheat exports to \$955 million while exports of wheat (other than durum wheat) declined 7% to \$2.5 billion as a result of lower prices combined to a decline of 3% in terms of level of shipments. Exports of corn were up significantly in 1999, totalling \$124 million compared to \$39 million in 1998.

Exports of oilseeds were down 24% to \$1.9 billion, due to significantly lower prices and to a lesser degree to declines in terms of the level of shipments. Canada's exports of rapeseed

were down 22% to \$1.3 billion reflecting lower prices and a decline in export volume. During 1999, lower prices brought a decline of 20% in exports of soybean to \$268 million. Exports of dried pulses rose 10% to \$725 million. The value of corn shipments reached \$124 million in 1999, compared to \$39 million in the previous year. Exports of animal feeds declined 7% to \$764 million.

Exports of grain products up 13%, oilseed products down 38%

Total exports of grain products rose 13% to \$1.5 billion (Figure 5). This performance was the result of a surge in exports of pasta products (up 41% to \$152 million) combined to strong increases in exports of mixes and dough for the preparation of bakery products (up 8% to \$183 million) and other bakery products (up 19% to \$653 million). However, exports of some grain products declined in 1999, exports of malt were down 19% to \$166 million.

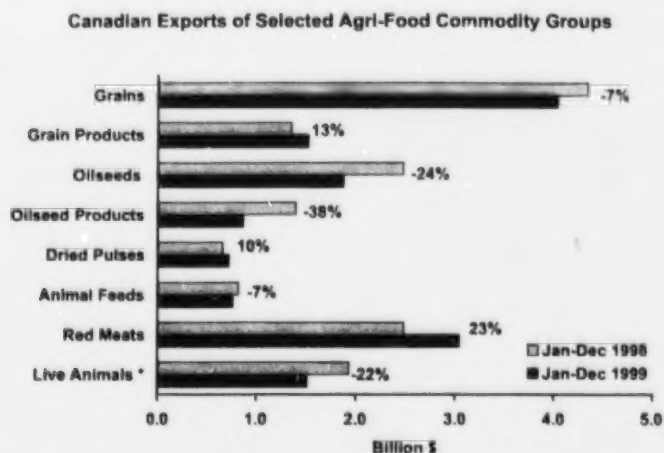

Exports of oilseed products (oil, oilcake and meal) were down 38% to \$867 million in 1999. The sector was especially affected by the drop in the value of rapeseed products during 1999. Exports of rapeseed oil fell 48% to \$504 million while exports of rapeseed oilcake and meal were down 26% to \$218 million. These declines were due to reduction of 32% and 14% in world rapeseed oil and meal "indicator" prices and they also reflected the overall drop in world vegetable oil prices.

Exports of red meats up 23%, live animals down 22%

Exports of fresh and frozen red meats totalled \$3 billion, an increase of 23% compared to 1998 (Figure 5). The surge in red meat exports in 1999 reflected the recent increases in meat processing and slaughter capacity for beef and pork in Canada as well as higher prices for beef. At \$1.5 billion, exports of fresh and frozen beef were up 30% as a result of a 13% rise in volume combine to relatively strong export prices. The value of fresh and frozen pork exports were up 22% to \$996 million essentially due to increased volume (up 22%).

By contrast, exports of live animals (excluding poultry) were down 22% to \$1.5 billion (Figure 5) as more cattle and hogs are slaughtered in Canada. Exports of non-dairy cattle were down 27% to \$975 million as a result of 37% decline in the volume of shipments. Exports of swine decline 21% to \$337 million. However, exports of live animals other than non-dairy cattle and swine rose 7% to \$102 million in 1999.

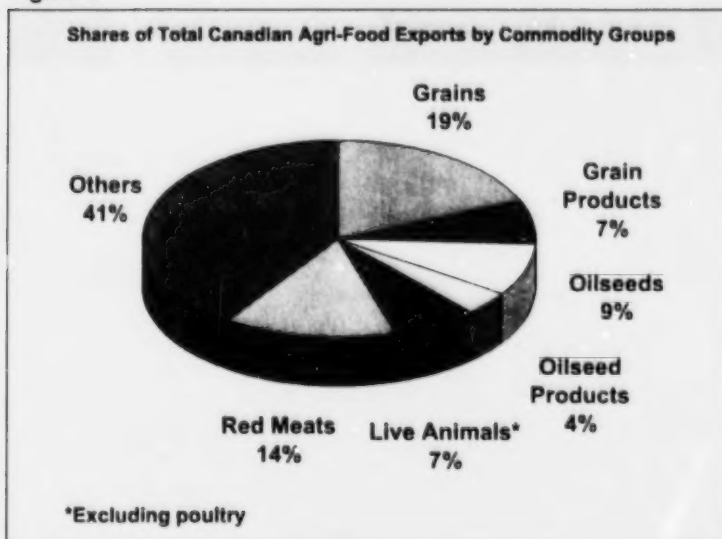

Figure 5

* Excluding poultry

Note: % refers to comparison with the same period in 1998

Figure 6

Exports of dairy products down 13%, poultry and eggs down 4%

Although exports of skim milk powder reached \$81 million (up 11%) and exports of fluid milk totalled \$14 million in 1999 compared to \$7 million the year earlier, Canada's total exports of dairy products were down 13% to \$364 million. Exports of cheddar cheese declined 13% to \$69 million, exports of cheeses

other than cheddar were down 30% to \$60 million and exports of evaporated milk fell by 51% to \$31 million.

Exports of poultry and egg products were down 4% to \$184 million. The declines in exports of fresh and frozen poultry meat (down 24% to \$68 million) and live poultry (down 14% to \$32 million) were offset in part by the increases in the exports of processed poultry meat products (up 91% to \$26 million) and processed egg products (up 19% to \$25 million).

Exports of potatoes and potato products up 15%, other vegetables up 12%

Exports of potatoes and potato products reached \$771 million (up 15%). The increases in exports of frozen potatoes (up 22% to \$567 million) have offset the declines in exports of fresh table potatoes (down 11% to \$117 million) and fresh seed potatoes (down 10% to \$53 million). Exports of fresh and frozen vegetable products (excluding potatoes) totalled \$664 million (up 12%) reflecting increased exports of fresh tomatoes were up 18% to \$180 million.

Exports of alcoholic beverages up 12%, processed plantation crops down 2%

At \$969 million, exports of alcoholic beverages especially distilled beverages and beer rose by 12% over the value registered in 1998. Exports of distilled beverages totalled \$653 million, up 12%; while exports of beer and stout were up 1% to \$276 million. Canada's exports of products made from plantation crops such as coffee, cocoa, tea and natural latex and rubber reached \$545 million, down 2%. Exports of coffee products were down 2% to \$223 million and exports of cocoa products declined 8% to \$263 million. Exports of tea products were up 31% to \$56 million as a result of higher prices and an increase of 16% in the volume of shipments.

Imports of Selected Commodity Groups

Imports of grains down 18%, grain products up 4%

At \$316 million, imports of grain commodities, primarily corn and rice, were down 18% compared to 1998. Imports of corn declined 28% to \$133 million reflecting lower level of shipments (down 23%). Imports of rice were down 4% to \$171 million. By contrast, imports of grain products rose by 4% to \$1 billion. Imports of bakery products other than mixes and dough were up 1% to \$406 million, while imports of pasta products reached \$232 million, (up 4%).

Imports of fruit and nuts up 6% and fresh and processed vegetables up 1%

Imports of fruit and nuts totalled \$2.9 billion, up 6%. The declines in imports of fresh oranges and other citrus products down 8% to \$264 million, and in imports of bananas and plantains down 7% to \$222 million were offset by increases in imports of dry nuts up 15% to \$244 million and in imports of fresh grapes up 7% to \$280 million.

At \$1.7 billion, imports of fresh and processed vegetables other than potato products were up 1%. The drop in the value of imports of products such as fresh tomatoes (down 11% to \$179 million) and fresh lettuce (down 2% to \$185 million) were offset by the increased imports of canned vegetable products (up 9% to \$143 million), fresh peppers (up 2% to \$115 million) and fresh carrots (up 13% to \$81 million).

Imports of plantation crops down 14%

Total imports of plantation crop products such as coffee, cocoa, tea and natural latex declined 14% to \$1.5 billion as a result of the declines in the import prices of most products in that group of commodities. The value of imports of coffee products were down 17% to \$762 million, imports of cocoa products declined 9% to \$416 million, and imports of crude natural latex and rubber totalled \$167 million, down 24%. Conversely, imports of tea products were up by 6% to \$121 million.

Alcoholic beverages up 16%

Imports of alcoholic beverages reached \$1.4 billion, up 16% compared to the value of these imports in 1998. At

\$797 million, imports of grape wine were up 14% and they represented 58% of the total imports of alcoholic beverages in 1999. Imports of distilled beverages were up 13% to \$341 million. Imports of beer and stout surged 29% to \$188 million due to higher prices combined to increased shipments (up 16%).

Imports of beef up 7% and pork down 4%

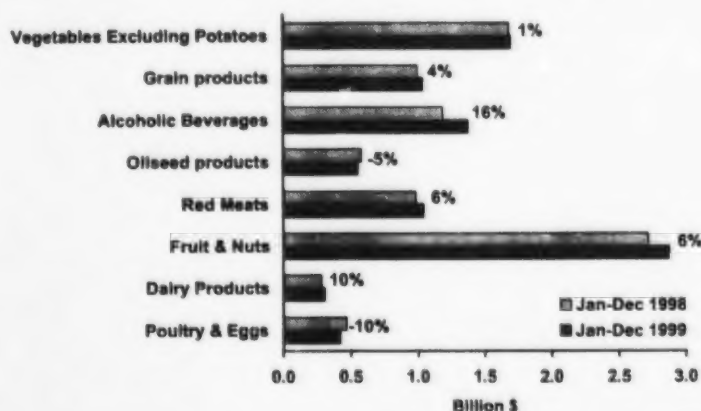

Fresh and frozen beef imports rose 7% to \$622 million in 1999. Imports of sausages and similar prepared pork products rose 6% to \$68 million. By contrast, imports of fresh and frozen pork meat declined 4% to \$124 million. Total imports of red meats reached \$1 billion in 1999, up 6% compared to 1998 (Figure 7).

Imports of cheese (other than cheddar cheese) up 6%, fresh and frozen poultry meat down 6%

Imports of dairy products totalled \$309 million, up 10% compared to the value of imports registered in 1998 (Figure 7). Cheeses other than cheddar cheeses, which represented 59% of the total imports of dairy products, were up 6% to \$183 million. Imports of poultry and egg products declined 10% to \$425 million as imports of fresh and frozen poultry meat were down 6% to \$193 million.

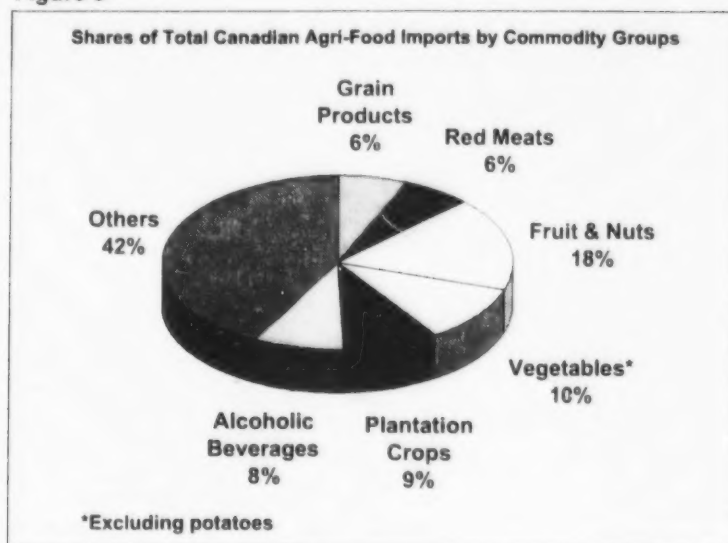

Figure 7

Canadian Imports of Selected Agri-Food Commodity Groups

Note: % refers to comparison with the same period in 1998

Figure 8

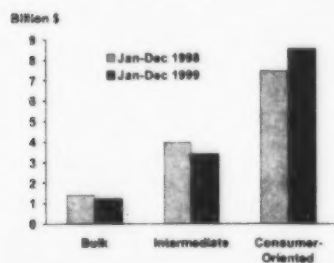

Agri-Food Trade with the United States

Two-way agri-food trade between Canada and the U.S. up 2%

The total value of Canada-U.S. trade in agri-food products rose by 2% to \$23.3 billion in 1999. This bilateral exchanges accounted for 61% of the total Canadian agri-food trade in 1999. Canada's exports to the U.S. exceeded imports by \$3.1 billion, up 11% compared to 1998. The trade surpluses were down 17% to \$351 million for bulk commodities and down 29% to \$1.5 billion for intermediate products, while the trade surplus for consumer-oriented products registered a surge from \$268 million in 1998 to \$1.2 billion in 1999.

Figure 9

Canadian Exports of Agri-Food Products to the U.S.*

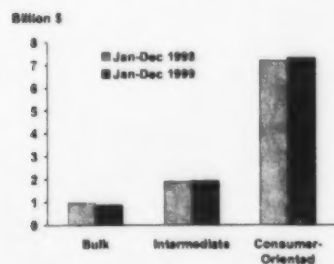

*Based on a bulk, intermediate and consumer-oriented (BCO) classification.

Bulk and intermediate exports to the U.S. down 11% and 14% respectively, and consumer-oriented exports up 14%

The trade data from Statistics Canada indicated declines in the value of exports of bulk and intermediate agri-food products, while consumer-oriented agri-food exports to the U.S. rose significantly. During 1999, Canada's exports of bulk products to the U.S. were down 11% to \$1.3 billion, and exports of intermediate products declined 14% to \$3.4 billion. By contrast, exports of consumer-oriented agri-food products reached \$5.5 billion, up 14% (Figure 9).

Figure 10

Canadian Imports of Agri-Food Products to the U.S.*

*Based on a bulk, intermediate and consumer-oriented (BCO) classification.

Bulk imports from the U.S. down 8%, intermediate and consumer-oriented up 2% and 1% respectively

Imports of bulk agri-food commodities from the U.S. were down 8% to \$881 million due in part to the decline of Canada's imports of U.S. corn in 1999. Imports of U.S. intermediate agri-food products rose by 2% to \$1.9 billion. Consumer-oriented agri-food products imported from the U.S. reached \$7.3 billion, up 1% (Figure 10). Unlike during the previous years, Canada enjoyed in 1999 a trade surplus for consumer-oriented type of agri-food products with regard to the U.S. totalling \$268 million.

Exports of Selected Commodity Groups to the U.S.

Exports of live animals to U.S. down 22%, red meats to U.S. up 24%

The value of exports of live animals (excluding poultry) declined 22% to \$1.5 billion due to the drop in shipments of non-dairy cattle and lower prices for swine. Exports of non-dairy cattle totalled \$975 million (down 27%), and exports of swine reached \$336 million (down 21%).

By contrast, exports of red meats were up 24% to \$2.3 billion. The value of exports of fresh and frozen beef totalled \$1.4 billion (up 27%) reflecting strong prices in the U.S. and increased shipments (up 11%). Exports of fresh and frozen pork meats were up 20% to \$560 million due to the increase of 20% in total shipments to the U.S..

Exports of grains to the U.S. down 4%, grain products up 21%

Exports of Canadian grains to the U.S. were down 4% to \$768 million. Although exports of durum wheat rose by 15% to \$136 million, the other major categories of grain exports to the U.S. declined in 1999. Exports of wheat other durum wheat were down 7% to \$295 million, exports of barley fell by 14% to \$121 million, while exports of oats declined 8% to \$153 million.

The value of Canada's grain products such as flour and bakery products shipped to the U.S. reached \$1.3 billion, up 21%. Exports of mixes and dough rose 8% to \$109 million, while exports of other bakery products totalled \$227 million, up 21%. Exports of hard spring wheat flour were up 97% to \$37 million due to higher export prices and an increase of 54% in the volume of exports.

Exports of oilseeds down 37%, oilseed products to U.S. down 14%

At \$206 million, exports of Canadian oilseeds to the U.S. declined markedly in 1999. Exports of canola were down 50% to \$74 million and exports of flaxseed declined 11% to \$66 million. The total value of Canadian oilseed products (i.e. oil, oilcake and meal) also declined. Exports of rapeseed oilcake and meal declined 23% to \$197 million. Exports of oilseed

products were down 14% to \$748 million. At \$429 million, exports of rapeseed oil were down 15%. The main exceptions among this group of exports was the increase of 7% to \$105 million registered for other oils and fats.

Exports of alcoholic beverages to U.S. up 14%

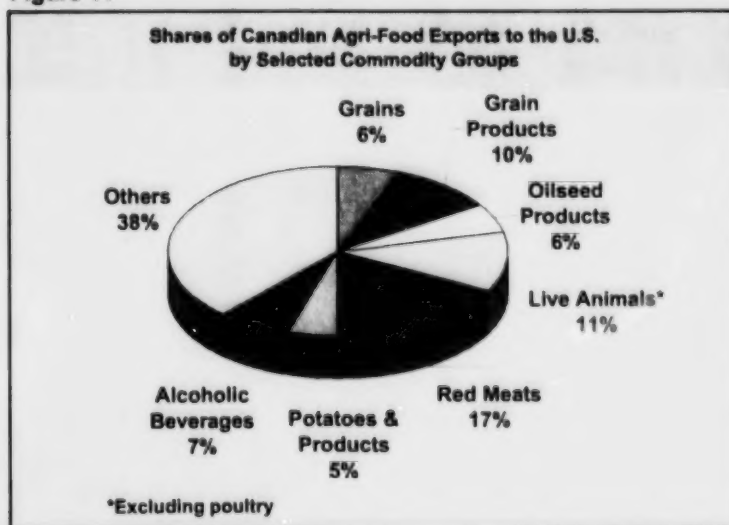

Canada's exports of alcoholic beverages to the U.S. totalled \$900 million, up 14%. Distilled beverages accounted for 65% of the total value of Canadian shipments of alcoholic beverages to the U.S. in 1999. Exports of distilled beverages reached \$588 million, up 14%. Exports of beer and stout were relatively unchanged at \$276 million.

Exports of fresh and frozen vegetables to U.S. up 14%, potatoes and potato products up 15%

Exports of fresh and frozen vegetables (including processed products) were up 14% to \$599 million. Exports of fresh tomatoes reached \$180 million (up 18%) and exports of frozen vegetables totalled \$84 million (up 6%). Exports of processed vegetables products other than canned vegetables and vegetable juices were up 11% to \$105 million.

Exports of fresh and processed potatoes to the U.S. were up 15% to \$126 million in 1999. At \$460 million, exports of frozen potatoes were up 20%, and represented 73% of total exports of potato products shipped to the U.S. in 1999. Exports of fresh table potatoes were down 10% to \$93 million. Exports of seed potatoes to the U.S. were up 3% to \$47 million in 1999.

Figure 11

Imports of Selected Commodities from the U.S.

Imports of fruit and nuts from U.S. up 1%

At \$1.5 billion, imports of fruit and nuts from the U.S. were up 1%. Fruit and nuts were the most important category of agri-food imports from the U.S., with fresh grapes up 12% to \$162 million, fresh berries up 27% to \$135 million, dried and fried nuts up 14% to \$122 million, and fruit juices up 2% to \$345 million.

Imports of vegetables from the U.S. up 1%, potatoes and potato products down 8%

Imports of fresh, frozen and processed vegetables products from the U.S. were up 1% to \$1.3 billion. Imports of fresh tomatoes were down 3% to \$138 million, and imports of fresh lettuce were down 2% to \$182 million. By contrast, imports from the U.S. of fresh carrots were up 11% to \$79 million, while imports of canned vegetables products reached \$95 million, up 7%. Imports of fresh, frozen and processed potatoes from the U.S. totalled \$202 million, down 8%.

Imports of grain products from U.S. up 4%

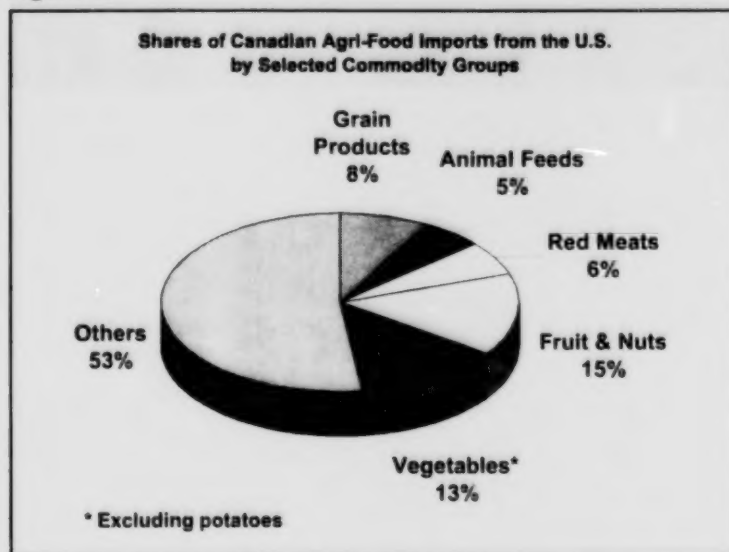

Imports of grain products from the U.S. rose 4% to \$828 million (Figure 12). Imports of mixes and dough for the preparation of bakery products totalled \$80 million, up 4%. Imports of bakery products other than mixes and dough were up 1% to \$302 million and imports of pasta products reached \$156 million, up 6%.

Imports of red meats from the U.S. down 2%, other animal products also down 4%

Canada's imports of U.S. red meats declined 2% to \$626 million reflecting lower import demand for beef and pork. Imports of fresh and frozen beef from the U.S. were down 7% to \$234 million. Similarly, imports of fresh and frozen pork meats also declined in 1999, by 9% to \$87 million. However, imports of sausages and similar products and imports of processed beef products totalled \$68 million each or a gain of 6% and 13%, respectively. Imports of other animal products such hide and furs were down 4% to \$303 million.

Imports of animal feeds down 3%

At \$544 million, imports of animal feeds from the U.S. were down 3% in 1999, compared to 1998. Imports of dog and cat food, which represented 54% of total animal feeds imports from the U.S., were down 1% to \$296 million. Imports of complete feeds were also down by 1% to \$181 million. Imports of crop by-products used for animal feeding were down 16% to \$31 million.

Figure 12

Trade with Major Regions and Countries Other than the United States

Exports to Destinations Other than the U.S.

Exports to the European Union down 18%

At \$1.3 billion, Canadian agri-food exports to the EU-15 were down 18% compared to 1998 (Figure 13). Agri-food trade between Canada and the EU-15 during 1999 were marked by declines in the major exported commodities such as grains (down 5% to \$327 million), oilseeds (down 51% to \$177 million) and animal products other than meats and meat products (down 38% to \$84 million). However, Canada's exports of pulses to the EU-15 rose by 2% to \$216 million.

Exports to Japan down 4%

Canada's total agri-food exports to Japan were down 4% to \$1.9 billion (Figure 13). The increases in exports of red meats which rose by 16% to \$433 million and grains which totalled \$368 million (up 4%) were offset by the declines in exports of oilseeds down 10% to \$728 million. Exports of animal feeds have also declined in 1999 (down 6% to \$121 million) and grain products (25% to \$76 million).

Exports to the Rest-of-Asia down 24%

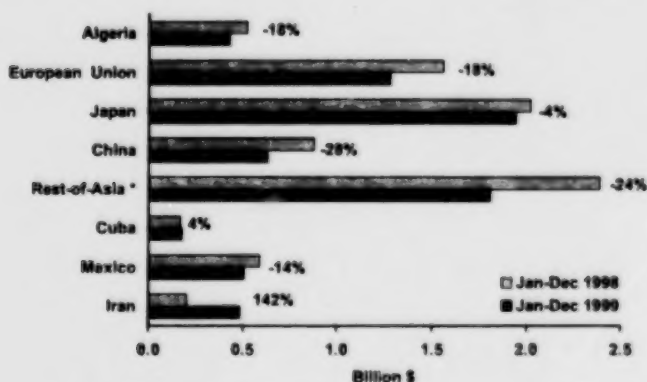

Canada's exports of agri-food products to the Rest-of-Asia (which excludes Japan) fell 24% to \$1.8 billion in 1999 (Figure 13). Total exports of agri-food to China were down 28% to \$630 million, as the value of shipments declined in the case of oilseeds commodities (down 14% to \$434 million) and grains (down 62% to \$106 million). However, with the present economic recovery in most Asian countries there are signs of increases in Canadian exports to some destinations in that region. For example, Canada's agri-food exports to the Philippines were up 34% to \$125 million.

Exports to Mexico down 14%, Iran up 142%

Exports to Mexico were down 14% to \$506 million in 1999 reflecting declines in exports of grains (down 1% to \$179 million), oilseeds (down 41% to \$166 million) and dairy products (down 8% to \$36 million). However, exports of Canadian red meats to Mexico surged from \$12 million in 1998 to \$58 million in 1999. A major highlight of the year was the sharp increase in Canadian agri-food exports to Iran which totalled \$484 million, up 142% (Figure 13).

Figure 13

Canadian Agri-Food Exports to Destinations Other than the U.S.

Imports from Sources Other than the U.S.

Imports from the European Union up 8%

At \$2.2 billion, the value of products imported from the EU-15 were up 8% and they accounted for 13% of the total value of Canada's total agri-food imports or one third of imports from the sources other than the U.S. in 1999. Increases in agri-food imports from the EU-15 were recorded for alcoholic beverages (up 18% to \$863 million), dairy products essentially cheeses (up 7% to \$132 million), grain products (up 2% to \$128 million) and fruit and nuts (up 27% to \$117 million).

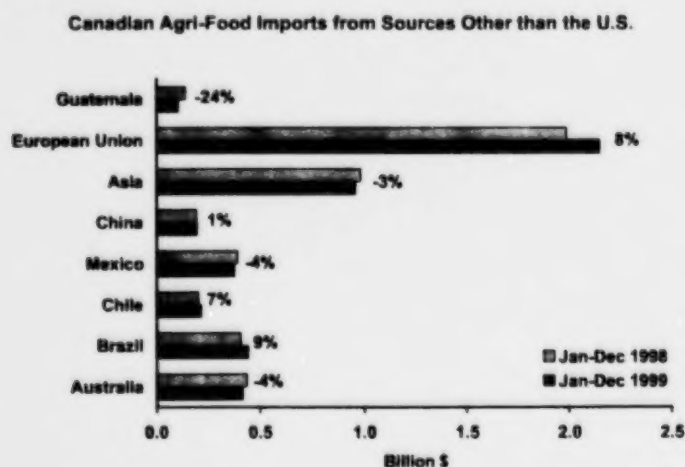

Imports from Asia down 3%

Imports from Asia were down 3% to \$959 million in 1999. Imports of plantation crops were down 20% to \$274 million and grains such as rice were down 10% to \$60 million. However, imports of fruit and nuts rose 17% to \$184 million and imports of grain products and vegetables were up 12% to \$71 million and 20% to \$70 million, respectively. While imports from Indonesia were down 22% to \$155 million. By contrast imports from China rose 1% to \$197 million and imports from the Philippines were up 15% to \$40 million.

Imports from Mexico down 4%, imports from Brazil up 9%

Imports of agri-food products from Mexico declined 4% to \$377 million. Although imports of fruit and nuts rose 5% to \$124 million, imports of vegetables excluding potatoes were down 15% to \$110 million. Imports of other agri-food products from Mexico were also down, plantation crops declined 34% to \$31 million. Canada's imports from Brazil reached \$442 million, up 9%. The increases reflected imports of plantation crops (up 2% to \$183 million), fruit and nuts (up 18% to \$149 million) and sugar products (up 41% to \$79 million). Imports from Chile were up 7% to \$215 million, while imports from Guatemala declined 24% to \$107 million.

Trade Data Processing by Statistics Canada

By Iddi Alhassan

Introduction

The trade data used in the Quarterly Agri-Food Trade Highlights are provided by Statistics Canada (STC). Understanding the data collection process is crucial for interpreting trade flows and the performance of Canada's agri-food industry. In particular, the process for measuring Canada's agri-food exports differs significantly between exports to the USA and other destinations.

This article describes the sources of exports data for all commodities and the edit and imputation processes regarding the computation of the agri-food trade data at the International Trade Division of Statistics Canada. It highlights the grain export data and linkages between STC and the US Bureau of the Census (USBC). In general, the article explains the methodology used to ensure consistency and to reduce export under-coverage by using supplementary information from other sources such as the Canadian Grain Commission (CGC).

Sources of exports data

The four main sources of Canadian export data are: Form B13A, completed by Canadian exporters or their agents when they export to non-USA destinations and forwarded to STC via Canada Customs and Revenue Agency regional offices. Summary Reports, a monthly consolidation of exports submitted to STC via Canada Customs and Revenue Agency (CCRA) by a few exporters. Customs Automated Export Declaration (CAED), an electronic version of the B13A designed by STC and CCRA to facilitate export data reporting in an increasingly electronic age. The USBC, which supplies USA imports originating from Canada to STC, to be used as Canadian exports to the USA.

Through consultation with users of trade data and data confrontation with other sources of trade information, the above sources have been found to have some inherent problems. For exports to non-USA destinations, export under-coverage has been identified in some commodities. In both exports to the USA and non-USA destinations we have identified a measure of export misallocation due largely to an increasing volume of in-transit movement that are being incorrectly reported.

An alternate source of grain exports data is the Canadian Grain Commission, which publishes monthly grain shipments by destination.

To remedy the shortfall in the official sources of grain exports statistics, STC was using the CGC source to adjust total Canadian export numbers at the Balance of Payments level of

aggregation. This adjustment improved the coverage of the numbers at the aggregate level, but left the commodity level details unadjusted.

Recently, with improvement in the timeliness of the CGC source, and a tweaking of non-US export processing, STC has started using the CGC data to supplement the official sources at the detail commodity level.

Processing of exports data at Statistics Canada

Edit and imputation of non-USA export data:

The B13A documents and the Summary reports are received and the data captured at STC. The CAED data are also received electronically and processed at STC.

When processing the data on exports to non-USA destinations, STC uses four primary edits: validation, unit value, combination and high value edits.

Validation edits: prevent the capture of invalid data such as alpha data in numeric fields.

Unit Value edits determines whether or not the price (value/quantity) of the data being captured falls within acceptable bounds established for the commodity.

Combination edits: indicate that specific combinations of some variables are not acceptable according to criteria in the system. For instance, a combination edit may indicate that the "HS code for Camaro with Province of Origin other than Quebec" is not acceptable. Such edits are based on prior information about the variables used in the edit.

Imputation

No automatic imputation is done because the non-US export process is on online.

However, in the case of some grains such as wheat, a table provides a provincial distribution of the data based on the previous year's crop net receipt and shipments at the Canadian Grain Primary Elevators. This is because the source data does not contain province of origin of the grains.

The "2 Peel" processes

The Peel process is one by which data captured and processed on the Unix System at the International Trade Division are moved from this environment and put in a Mainframe environment for further processing.

At the time of the scheduled 1st peel, all of the non-US export documents received would have been captured. The peel is performed to enable the staff to analyze the data in aggregate form to see if erroneous may have been captured. It also enables staff to start looking for explanations for observed commodity movements. Any errors detected between the 1st and 2nd peels are corrected before the 2nd peel.

Right after the 1st peel, the Subject Matter Officer responsible for grains is provided with a table that shows what has been captured or received through Customs Automated Electronic Declaration (CAED) and to compare this information with CGC numbers. Any difference is

allocated to CGC and captured. Between the 1st and 2nd peels any export document that were received are captured. Just before the 2nd peel, the Subject Matter Officer receives another table of grain exports, so that if necessary the amount previously allocated to CGC can be adjusted.

The purpose of the above process is to get as much detail as possible for the other variables that are not available from the CGC source.

Data quality control in the processing of exports to the USA

In 1990, the Canada and the USA implemented an Import Data Exchange Agreement, which provides for the two countries to use each other's import statistics as substitute for the receiving country's exports. The process of data quality control in the USBC import processing system is quite complex, but similar to what STC does on Canada's imports from the USA.

As part of the data exchange, STC and the USBC agreed to harmonize their import edits. This agreement allowed each country to contribute to the edit criteria of the other country's import data, which would ultimately become the recipient's export data. In this regard, there are a number of areas of most concern to STC in exports to the USA:

- unit value edits
- provincial distribution of exports
- high value transactions

Consequently, the Subject Matter Officers of STC and the USBC harmonized the unit value parameters used in each other's import systems. They agreed that the criteria being used were in the best ranges.

Known problem areas with provincial misallocation of Canada's exports to the USA were converted into edit criteria that the USBC put into their import processing system. Failure of these edits resulted in imputation or investigation followed by corrective action. To further improve the quality of Province of Origin data, the USA began to collect this variable directly from their importers or their agents in 1995. Before then, the Province of Origin variable was being derived from another variable called the Manufacturer's ID.

The four stage process

To allow for further joint quality control over export data, the USBC sends their import data to STC in four stages. This schedule for data exchange allows STC to receive the bulk of the data in the first two stages. STC then has sufficient time to process the data, to examine them at both the detail and aggregate levels, and to raise data quality-related questions with their USBC counterparts. Stage three is usually much smaller volume in terms of data, and stage four data are "the bloopers", which are essentially changes to data contained in stages one to three.

From the agriculture perspective, the relationship between the USBC and STC is such that the Subject Matter Officers for food, animals and wood products talk to each other on a continuing basis.

Conversion and revisions

As a result of the import data exchange with the USA, the processing of the data of Canadian exports to the USA is primarily one of converting U.S. codes to their Canadian equivalents.

Changes to the current month's data are made within the processing cycle and are transparent to the user. For changes to the previous month's data, STC continues to make changes on a flow basis to Canadian import data, which become U.S. export data. However, the USBC does not change its import data, which become Canadian export data, after the release date in the current year. On an annual basis, the USBC makes changes to the previous months and sends STC a year-end errata file. This file accommodates all changes pertaining to the previous year. Data pertaining to years prior to the most recent previous year are not revised by the USBC. Canadian trade data meanwhile are subject to revisions affecting the most recent previous four years.

Processing of grain export data

On a monthly basis, grain export data, published by the CGC are compared by destination to the B13A, Summary reports and CAED data capture at Statistics Canada.

For each destination, STC captures the difference between the CGC quantity and the STC quantity and assigns the difference to CGC as the exporter.

For each destination, the average price per ton is calculated from the STC data captured and multiplied by the quantity assigned to CGC to obtain the value. In the case of wheat the Canadian Wheat Board supplies the price used.

All of the quantity and value of canola exports assigned to the CGC are assigned to British Columbia as the province of origin. In the case of wheat, STC uses a formula to distribute the value and volume by province.

The 2nd Peel of non-USA data allows STC to perform the above process with the data from the current month. The implementation of the 2nd Peel and the adjustments to the non-US export processing system was critical in making it feasible to apply these CGC adjustments to the customs basis data. Without it, the CGC figures would not have been timely enough.

The B13A documents received between the 1st and 2nd peel are captured and the CAED data received are also processed. Then the CGC adjustments are modified to ensure that the total exports, in terms of quantity, published by STC are the same as those already published by CGC.

Additional data received after the 2nd Peel of non-U.S. data are kept in a file without being captured.

STC performs an annual revision process where all B13A data received after the release of grain exports is captured along with the annual data provided by the CGC data. This step simultaneously adjusts for revisions that CGC may have made to their data while allowing STC to re-allocate canola export to the appropriate province of origin and exporter.

While efforts are made to ensure the grain export figures published by STC are as accurate as possible, there is always the possibility of inaccuracy. This possibility exists because of the time pressure between the 1st and 2nd peels. As soon as such an inaccuracy is detected, STC takes

action to correct the data, usually the following month as current year data are subject to revisions every month.

Review and monitoring

During each month's processing cycle, the edit and imputation processes done on the detailed data are supplemented with review of the summary or aggregate data. Data are aggregated from the individual records to the total commodity (HS) level, to the summary group level, and on to the major group level and higher levels of aggregation. The Subject Matter Officers and their team leaders analyze the aggregate data, looking for anomalies and determining corrective action. Anomalies are investigated through a drill down review. Such review would normally result in an economic explanation for the observed movement of the data or the discovery of an error and its subsequent correction.

Monthly analysis report

The Subject Matter Officers prepare a monthly analysis report. This report becomes the basis for briefing the Chief Statistician, the Minister of Industry who is responsible for Statistics Canada and the Marketing and Client Services Section of the International Trade Division. The briefing provides the background for responding to questions arising from the media and other users after the release of the trade data.

Interdepartmental committee on data quality in the food and agriculture sector

The above committee was initiated in 1999 to become the focal point for raising and addressing trade data quality issues of concern to Agriculture and Agri-Food Canada. Long-standing issues in grain exports have been addressed as well as anomalies that have surfaced in other commodity areas. There are initiatives to address data problems in pork, beef and the dairy sectors.
